

RUM Community Group

2025-01-17 Edition

Agenda

- Greetings from the Chairs
- Welcome everyone to the group
 - + a quick round of intros
- Logistics (where and how to communicate)
- Goals and Meeting Topics for 2025

Greetings from Chairs

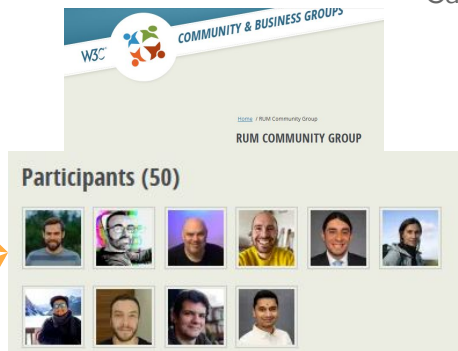

Role of Chairs

- Plan meetings and agenda
 - + with input from everyone here!
- Facilitate meetings + discussions
- Build consensus
- Communicate externally
- **Not** arbitrators of what's important

Vision of RUM CG

"We're changing X"
"Heads-up for Y"
"New experimentation with Z"

"Please implement X"
"We're having a problem with Y"
"Can we get traction on Z?"

"Please start or stop X"

**CDNs
Third-Parties
(3Ps)**

"What are your use cases for X?"
"How often does Y affect you?"
"Would Z solve your problem?"

"Solving this problem would help"
"Here are the most important things to us"
"We'd like to propose X"

Welcome / Intros

- Brief introduction:
 - ‘Who are you?’
 - ‘Where ya from?’
 - ‘What would you say you do here?’

Logistics

- When should we meet and how often? (Poll)
 - Daily? **Monthly?**
 - 30-**60m?**
 - Wednesday or Friday?
 - ~10am EST
- Agenda Document
 - (bit.ly/rumcg-agenda)
- Google Meet for Meetings
 - ([invites](#))
- Chat on Web Performance Slack #w3c-rum-community-group
 - ([invites](#))
- public-rumcg@w3.org

1:06 Second, we'd also like to take a poll to understand what times the second **Wed or Fri** of each month, at around **10am EST**.

Could folks vote (with emojis) if Wed (1) or Fri (2) might work?

Scheduling a new recurring meeting for a diverse group of people will be able to make every meeting. We'll try to accommodate

Goals / Meeting Topics (Ideas)

- What do we want to work on together?
 - Tracking progress/positions by browser vendors
 - Feature funding for browsers (i.e. getting stuff done in webkit)
 - Header adoption (TAO, Server-timing)
- Browser vendor presentations/Q&A
- Collective outreach to move the needle on performance (i.e. 3rd Parties, CDNs)
- Engaging with AdBlockers & Tracking protection (CMPs?)
- Top tracking issues (e.g. in Github)
- What else????

Barry's Bytes

- **Cross-origin LCP render time will no longer be gated on Timing-Allow-Origin.** Sites may notice a change in their LCP in RUM. Note CrUX not affected as always measured this properly, and TAO still required for Firefox and older Chromes.
- **responseStart is changing back thereby changing TTFB for sites using Early Hints to be the finalResponseHeadersStart.** Note CrUX unaffected as never changed definition.
- **5 minute prefetch heuristic has been removed for cache-control:** no-store or max-age: 0. You now **MUST** use cache-control header if you want to use prefetch (note speculation rules has an exception as it has a different 5 minute rule). Sites may notice prefetch is used less.
- Other small updates.

Next Meeting

- 2nd Wed or Friday of each month
 - Wed February 12th @ 10am EST
 - Fri February 14th @ 10am EST
- Topic: Google + RUM Sync
- Homework: ???
