RUM Community Group

2026-02-11 Edition

Agenda

- Agenda for March / 2026
- Container Timing
- Barry's Bytes / Chrome update (-Barry)

Logistics

- Meeting cadence
  - 2nd Wednesday of the Month
  - 60 minutes
  - 10am ET
- Agenda Document
  - (bit.ly/rumcg-agenda)
- Google Meet for Meetings
  - sub to rumcg-participants for invites
- Chat on Web Performance Slack `#w3c-rum-community-group`
  - (invites)
- public-rumcg@w3.org
  - (for discussions)
- RUM CG Github Repo
  - github.com/w3c-cg/rum
  - Group details
  - Links
  - Meeting minutes
- RUM CG Tracking Project
  - github.com/orgs/w3c-cg/projects/1
- Meeting Minutes via fireflies.ai
  - AI summary + transcript will be posted after
  - Full video recording also available

Next Meeting

- Wed **March 11th** @ 10am EST
  - 2nd **Wednesday** of each month
- Topics?
  - Interop 2026 updates
  - CWV across the browsers
  - TAO / ServerTiming header adoption updates
  - CPU Perf API
  - Unused preload RUM - Yoav
- Submit & Vote topics @ bit.ly/rumcg-agenda

Topics Backlog

- ~~Better tracking/visibility into vendor positions (March 14)~~
- ~~Top tracking issues (e.g. this lighthouse issue) (March 14)~~
- ~~Baseline Project~~
- ~~Funding browser work for features~~
- ~~Header adoption (TAO, Server-timing)~~
- ~~Browser vendor presentations~~
- Outreach to other groups (i.e. 3rd Parties, CDNs)
- Ad Blockers & tracking protection
- Implementation best practices
  - When to fire the beacon/how to deliver
  - SPA support
- Making sure we don't step on each other's toes (i.e. clearing RT buffers, multiple vendors on a page, etc.)
- Open source
- Securing the beacon
- ~~RUM Archive~~
- ~~Callstacks from input delays (Issac Gerges thread in #general)~~
- ~~Container Timing awareness~~
- ServerTiming / trailers
- Bot and bad actor detection (bad CWV bots)
- AI browsers

let's go

Container Timing: measuring web components performance

10 February 2026 CHROMIUM BLOOMBERG WEBPERF CONTAINER TIMING

Over the last year, as part of the collaboration between Igalia and Bloomberg to improve web performance observability, I worked on a new web performance API: **Container Timing**. This standard aims to make component-level performance measurement as easy as page-level metrics like LCP and FCP.

My focus has been writing the native implementation in Chromium, which is now available behind a feature flag.

In this post, I will explain why this API is needed, how it works, and how you can experiment with it today. In a follow-up post, I will dive deep into the implementation details within the Blink rendering engine.

The problem: measuring component performance

We currently use Largest Contentful Paint (LCP) and First Contentful Paint (FCP) to measure web page loading performance. Both metrics are page-scoped, meaning they evaluate the user perceived load speed for full page.

The Element Timing API shifts the focus to individual DOM elements. By targetting specific elements, like hero images or a headers, we can measure their specific rendering performance independent of the rest of the page.

However, modern web development is component-based. Developers build complex widgets (as grids, charts, feeds or panels) that are made of many elements. It is not trivial to understand the performance of those components:

- LCP may not be useful as another large image painting could delay it.
- Measuring a web component with Element Timing may require instrumenting all the significant elements one by one.

Barry's Bytes

- Safari INP reporting slower than actually
  - https://webkit.org/b/305251
  - Not currently in 26.3 beta so might not be fixed until 26.4?
- 144 - Speculation Rules `prerender_until_script` origin trial
  - https://developer.chrome.com/blog/prerender-until-script-origin-trial
- 145 - Soft Navigations in Performance traces -
  - https://bsky.app/profile/tunetheweb.com/post/3mdzlhcq5tc2d
- 145 - Use of CssPixels in LayoutShift API
  - https://chromestatus.com/feature/5155103518228480
  - can affect if you have any CSS debugging tolls
- 145 - Add presentationTime/paintTime
  - https://chromestatus.com/feature/5162859838046208
  - https://web.dev/blog/lcp-and-inp-are-now-baseline-newly-available?hl=en#are_there_any_differences_in_the_implementations
- 146 - Device Memory Changes
